Choose Hydrofera Blue CLASSIC Dressings to Address Wound Bed Preparation

Successful wound management requires management of bioburden, maintaining moisture balance and removal of devitalized tissue. Hydrofera Blue CLASSIC dressings can help all of these in a single dressing.

The Wound Bed Preparation Paradigm¹

Sibbald, Ovington, Ayello, Goodman, Elliott, 2014.¹

Hydrate before use

Highly absorptive, PVA micro-pore foam structure

- Wicks and retains fluid
- Soft and flexible when moistened

Broad-spectrum antibacterial protection

- Provided by gentian violet and methylene blue

Choose Without Compromise

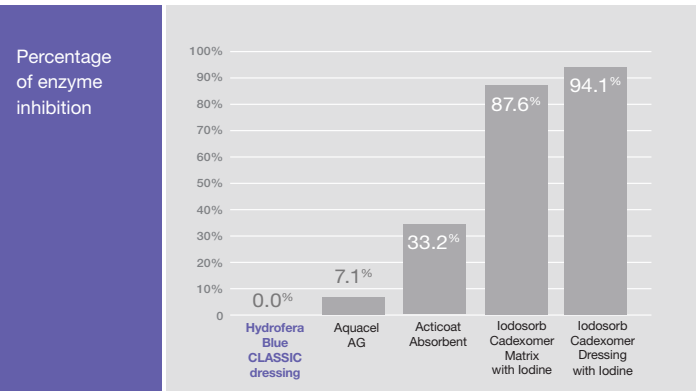

Choose Blue: Bioburden Management

- Broad-spectrum antibacterial activity provided by two well-known organic pigments, methylene blue and gentian violet
- Non-cytotoxic
- Less expensive than many silver foam dressings⁸

Choose Blue: Autolytic Debridement

- Multiple authors have observed autolytic debridement with use of Hydrofera Blue CLASSIC dressings.²⁻⁴
- In a porcine eschar study, a statistically significant reduction in eschar was seen when Hydrofera Blue CLASSIC dressing was used.²
These results may not be representative of effects in humans.

Hydrofera Blue CLASSIC dressings are compatible with enzymatic debriders⁵

In-vitro 24-hour digestion of collagen in Artificial Eschar Model by Collagenase²

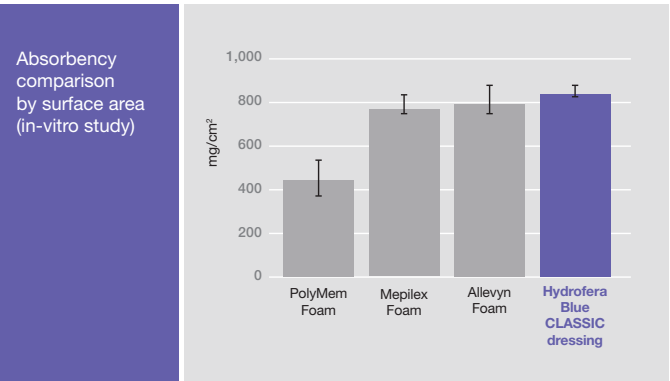

Example of devitalized tissue removed at dressing change

Choose Blue: Moisture Management

Hydrofera Blue CLASSIC dressings' micro-pore structure is specifically designed for wound care. It maintains similar absorbency as compared to other highly absorptive dressings.

Absorbency compared to other foam dressings⁹

Choose Blue: Edge Effect

Multiple authors have noted resolution of epibole or flattening of wound edges with use of Hydrofera Blue CLASSIC dressings^{4, 6, 7}

Hydrofera Blue CLASSIC dressing addresses edge effect¹⁰
